11. *(Currently amended)* A process for making an aqueous composition comprising;
I) combining,

A) an $(AB)_n$ block silicone polyether copolymer having the average formula;

where x ranges from 30 to 75, and y is greater than 4, the value of $x/(x+y)$ ranges from 0.2 to 0.9, m is from 2 to 4 inclusive,

z is greater than 2,

R is independently a monovalent organic group,

R^1 is a divalent hydrocarbon containing 2 to 30 carbons,

B) a water miscible volatile solvent selected from methanol, ethanol, isopropanol, or propanol, with water to form an aqueous dispersion,

- II) mixing the aqueous dispersion to form vesicles of the $(AB)_n$ silicone polyether copolymer having an average particle size of less than 10 micrometers,

- III) removing the water miscible volatile solvent from the aqueous dispersion.

16. *(Previously amended)* The process of claim 11 wherein a silicone or organic oil is included in the mixing of step I).

17. *(Previously amended)* The process of claim 16 wherein the silicone is a volatile methyl siloxane.

18. *(Previously amended)* The process of claim 16 wherein the silicone is a vinyl functional organopolysiloxane.

19. *(Previously amended)* The process of claim 16 wherein step I further comprises a personal, household, or healthcare active.
